

 <p>Cut line Compression Size of void</p>		
<p>1 You need: Siderise® Fixing Brackets, Siderise® Foil Tape RFT 120/45, suitable non-combustible mechanical fixings appropriate to substrate, supplied by contractor.</p>	<p>2 Cutting on site – tools required: marker, tape measure, knife and saw.</p>	<p>3 Cutting on site – Measure and mark the sheet: size of the void plus compression allowance as stated in the Certifire Certificate CF5646 and product datasheet.</p>	<p>4 Cutting on site – Cut in the direction that is marked on the foil face of the RF sheet.</p>	<p>5 Cutting on site – Use a sharp knife to cut through the foil facings on both sides.</p>
				
<p>6 Cutting on site – Cut the stone wool with a saw, being careful not to rip the foil facing.</p>	<p>7 Inserting Brackets – Impale fixing bracket mid thickness into the back of the RF strip. A sharp knife can be inserted first to make it easier. Brackets are impaled at nominal 600mm fixing centres, i.e. 300mm from each end.</p>	<p>8 Inserting Brackets – Using personal protection equipment (e.g. gloves) fold the bracket as shown.</p>	<p>9 Inserting Brackets – Maximum penetration of bracket is 75% of the width of the cut strip (e.g. if the cut strip is 100mm wide, bracket penetration is 75mm).</p>	<p>10 Installing Barrier – Insert the brackets into the unit in opposing directions as shown.</p>
				
<p>11 Installing Barrier– Take the RF unit and stand it on the floor in the correct location.</p>	<p>12 Installing Barrier – Secure using non-combustible fixings through the brackets into the floor slab in accordance with manufacturer's instructions.</p>	<p>13 Place next barrier – Install the abutting unit tightly ensuring no gaps between units.</p>	<p>14 No gaps/angle – Ensure the barriers are installed straight so there are no gaps in the joint.</p>	<p>15 Installing Barrier – Seal all RF abutted joints with Siderise® foil tape RFT 120/45.</p>

<p>16 Tape top edge of barrier – Siderise® recommend sealing the top edge of the barriers with Siderise® foil tape RFT 120/45. If an air plenum is required, also tape joint to floor.</p>	<p>17 Lay floor tiles over barrier – Install the floor tiles over the top of the barriers.</p>	<p>18 Check no gaps – Check no gaps are formed by tile joints, pack any gaps with offcuts and seal with Siderise® foil tape RFT 120/45.</p>	<p>19 Pipe and cable tray penetrations – For advice on penetrations through the RF barrier, please contact Siderise® technical team though technical@siderise.com.</p>	<p>FURTHER INSTRUCTIONS</p>
