

Siderise LGS Linear Gap Seal

Flexible intumescent linear gap seals for sealing junctions between building elements

Application

Siderise LGS Linear Gap Seals are flexible, water-resistant, intumescent linear gap seals that expand when exposed to heat. They provide a versatile means of sealing junctions between building elements against fire penetration. They are maintenance-free and resistant to fungi and vermin.

The compressible foam core accommodates different joint widths to allow for structural movement whilst providing fire resistance.

Standard sizes are available to suit voids up to 20mm and provides 2 hours fire resistance (Integrity only).

Product Description

Siderise LGS Linear Gap Seals are made from an open-cell flame retardant acoustic foam laminate with a graphite intumescent coating containing binders which ensure material flexibility.

In fire conditions, the seal maintains a close-fitting position to prevent the passage of cold smoke. At the designed temperature, the intumescent coating begins to expand on the fire side of the joint.

During this reaction, the foam gradually compresses and is replaced by the expanding mass of intumescent graphite.

The seal retains its flexibility on the non-fire side to accommodate any heat-induced movement of the structural elements. Thus the fire is prevented from penetrating rapidly into the joint.

Fire Performance

Table 1: Fire Resistance to BS 476-20:1987

Product Type	Max. Joint Width (mm)	Seal Width (mm)	Seal Depth (mm)	Integrity (E) (mins)
CJ/FS120/012-012	10	12	12	120
CJ/FS120/029-012	20	29	12	120

Application Technique: Compressed into gap/joint such that the multi-layers/banding are visible.

Siderise LGS Linear Gap Seals are supplied in 1 metre lengths with a width to suit the size of the gap required.

The standard sizes are listed in the Fire Resistance table above. For void sizes other than those tabled please contact the technical team.

- Block/masonry/concrete walls and floors shall be at least 150mm thick and have at least the same fire rating as that of the Linear Gap Seal.
- Block/masonry/concrete gap faces must be within the density range of 450 to 2300kg/m³, and gap faces must be free from loose or flaking material.

Environmental

Siderise LGS Linear Gap Seals environmental properties:

- Halogen-free
- Individual components may be separated mechanically; however, they are currently not recyclable.
- Please see Safety Data Sheet
